

Work on your assignment

2. What is the most challenging component of the assignment? Be as specific as possible.
3. Discuss this answer, and your progress, with your lab demonstrator
4. Document your progress so far and plans

It took me only 4 days to finish the assignment, so I do not see any challenging during my working on the assignment period. It's mostly about implementing components which are taught in the lectures and labs, so I do not see any problems coming up with the solutions. The most challenging part is implementing splitter into the wiring process. It took me a day until realizes that the order of the bits must be correct.
